Education

Ph.D., Biophysics 📅 2011–2017
Example University
📍 Example City

B.S., Biochemistry 📅 2008–2011
Example University
📍 Example City

Skills

Programming Languages

Python C++ TypeScript
JavaScript Rust

Scientific & Bioinformatics Tools

Microscopy Image Processing
Spectroscopy Data Analysis
Bioinformatics Pipelines
NumPy / SciPy / Pandas
Matplotlib / Seaborn / Plotly
Jupyter

Data Engineering & Software

Apache Airflow / Dask
Docker / Kubernetes
Cloud platforms (AWS / GCP)
CI/CD (GitHub Actions, Jenkins)
Git / GitHub

Taylor Smith | Scientific Software Engineer

Scientific software engineer specializing in biophysics and bioinformatics, with experience in microscopy and spectroscopy data analysis, computational modeling, and open-source scientific software. Skilled in mentoring teams, leading collaborative projects, and developing robust, reproducible pipelines for biological research.

Professional Experience

Lead Scientific Software Engineer

📍 Example Bioinformatics Lab | Remote 📅 2020–Present

- ▶ Led the end-to-end development of robust, open-source Python libraries for microscopy and spectroscopy data analysis, spanning raw data ingestion, signal processing, statistical modeling, and visualization, with a strong emphasis on reproducibility, performance optimization, and maintainability to support large-scale, high-throughput experimental workflows used daily by interdisciplinary research teams.
- ▶ Lead development of open-source Python libraries for microscopy and spectroscopy analysis.
- ▶ Designed reproducible pipelines for high-throughput experimental datasets.
- ▶ Mentored a team of junior developers and research interns in computational biology tools.
- ▶ Collaborated with biologists to integrate software pipelines into laboratory workflows.
- ▶ Established coding standards, testing, and CI/CD for bioinformatics projects.

Scientific Software Engineer

📍 Advanced Imaging and Bioanalytics Company | Example City 📅 2017–2020

- ▶ Built software for real-time microscopy image acquisition and spectral analysis.
- ▶ Developed interactive dashboards for visualization of bioinformatics and experimental data.
- ▶ Contributed to open-source scientific analysis projects, including bioimaging libraries.
- ▶ Provided workshops and training sessions on computational tools for researchers.

Research Associate

📍 National Institute for Molecular Imaging | Example City 📅 2012–2017

- ▶ Automated processing and analysis of microscopy and spectroscopy datasets.
- ▶ Assisted in integration of computational models with experimental workflows.
- ▶ Contributed example notebooks and documentation to internal bioinformatics libraries.
